

# Use of Hyperspectral Remote Sensing for the Retrieval of Agricultural Soil and Crop Parameters for Precision Agriculture and Yield Estimation (HyLand)

## – Sub-Project 1 „Soil“ –

### Objectives:

- Development of efficient methods for the quantification of topsoil parameters of agricultural areas from hyperspectral remote sensing data

### Duration:

- Start: 01.11.2010 End: 31.10.2013

### Products / Parameters:

- Spectral data base
- Models for the quantification of relevant soil properties
- Spatial data on  $C_{org}$ ,  $C_{inorg}$  and texture

Gefördert durch:

Bundesministerium  
für Wirtschaft  
und Technologie

aufgrund eines Beschlusses  
des Deutschen Bundestages

# Use of Hyperspectral Remote Sensing for the Retrieval of Agricultural Soil and Crop Parameters for Precision Agriculture and Yield Estimation (HyLand)

## – Sub-Project 1 „Soil“ –

### Added Value (quantitative /qualitative):

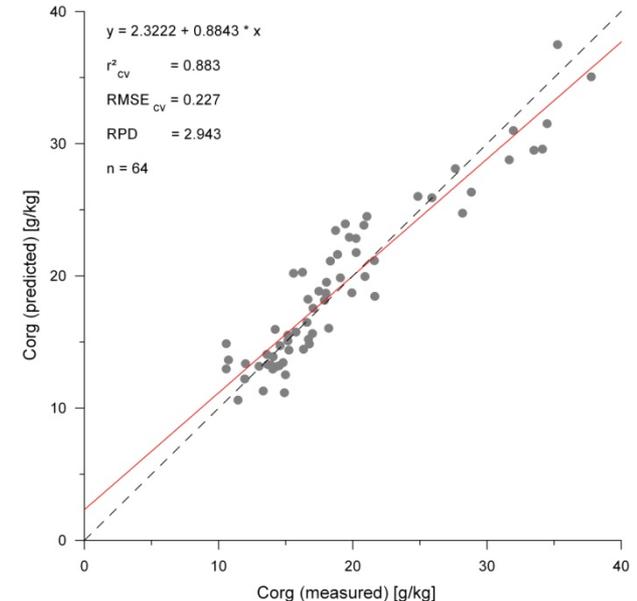

- Spatially and quantitatively higher prediction of soil organic carbon
- Fertilizer reduction and yield optimisation by site-specific fertilization

### Involved User Organisations:

- Agrargesellschaft Wulfen mbH
- Agrargenossenschaft Hinzdorf e.G.

### Additional:

- Test sites: Region Wulfen/Köthen (Saxony-Anhalt), Braunschweig
- Image data: AISA-DUAL, Penta-Spek

### Contact:

Thomas Jarmer, Institute for  
Geoinformatics and Remote Sensing /  
University of Osnabrueck

# Use of Hyperspectral Remote Sensing for the Retrieval of Agricultural Soil and Crop Parameters for Precision Agriculture and Yield Estimation (HyLand)

## – Sub-Project 2 „Crop“ –

### Objectives:

- Development of efficient methods to quantify the nutritional status of crops from hyperspectral remote sensing data

### Duration:

- Start: 01.11.2010 End: 31.10.2013

### Products / Parameters:

- Maps of the nutritional status of crops
- Processors for the quantification of relevant photobiochemical crop parameters
- Maps for site-specific nutrient application

# Use of Hyperspectral Remote Sensing for the Retrieval of Agricultural Soil and Crop Parameters for Precision Agriculture and Yield Estimation (HyLand)

## – Sub-Project 2 „Crop“ –

### Added Value (quantitative /qualitative):

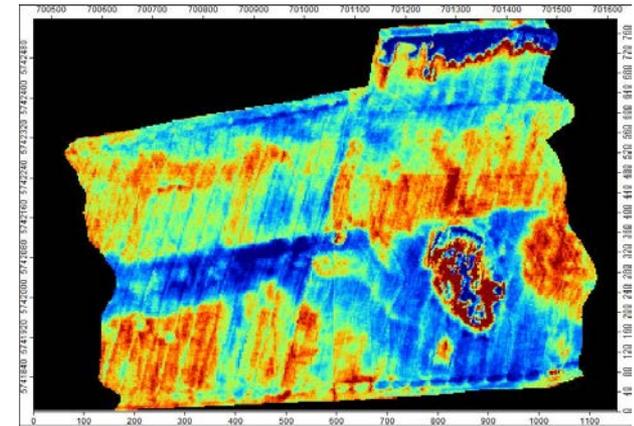

- Spatially and quantitatively enhanced knowledge for site-specific crop nutrition and fertilizer application
- Optimized resource management and yield formation by site-specific fertilization

### Involved User Organisations:

- Agrargesellschaft Wulfen mbH
- Agrargenossenschaft Hinzdorf e.G.

### Additional:

- Test sites: Region Wulfen/Köthen (Saxony-Anhalt), Braunschweig
- Image data: AISA-DUAL, Penta-Spek

# Use of Hyperspectral Remote Sensing for the Retrieval of Agricultural Soil and Crop Parameters for Precision Agriculture and Yield Estimation (HyLand)

## – Sub-Project 3 „Yield“ –

### Objectives:

- Coupling yield models with vegetation parameters from hyperspectral data, and terrestrial laser scanning
- Spatial projection of the expected yield and quality parameters

### Duration:

- Start: 01.11.2010 End: 31.10.2013

### Products / Parameters:

- Maps of various vegetation parameters (LAI, biomass, etc.)
- Maps of the expected yield

# Use of Hyperspectral Remote Sensing for the Retrieval of Agricultural Soil and Crop Parameters for Precision Agriculture and Yield Estimation (HyLand)

## – Sub-Project 3 „Yield“ –

### Added Value (quantitative /qualitative):

- Successive spatial projection of the yield and crop quality
- Improvement of marketing opportunities through site-specific harvest and marketing to product quality

### Involved User Organisation

- Agrargesellschaft Wulfen mbH
- Agrargenossenschaft Hinzdorf e.G.

### Additional:

- Test sites: Region Wulfen/Köthen (Saxony-Anhalt), Braunschweig
- Image data: AISA-DUAL, Penta-Spek
